

Digital Forensic Lab: Rape Murder

Case Title: Rape-Murder Case: Jim Rice Copenhagen

Case Number: 002

Investigator Name: Joshua II B Dajao, Vonzelle Cuizon

Date of Investigation: 07/07/2025

I. Evidence Identification

Created By AccessData® FTK® Imager 3.1.5.0	
Case Information	
Acquired using	ADI3.1.5.0
Case Number	002 - Rape Murder
Evidence Number	10102
Unique description	Rape Murder Case of Jim Rice Copenhagen
Examiner	Godwin S. Monserate
Notes	
Information for C	C:\Users\Godwin Monserate\Desktop\2ND Sem 2020-2021\Information Assurance and Security\Digital Forensics\Photo Crime\Rape and Murder\rape-murder-case:

IV. Attribution and Summary of Findings

In coordination with the initial acquisition conducted by **Insp. Godwin S. Monserate**, a comprehensive forensic analysis was performed on the flash drive image obtained from the suspect, **Jim Rice Copenhagen**. The image file was verified to be forensically sound, with consistent MD5 and SHA-1 hash values confirming its integrity.

Upon investigation, a total of **268 files** were recovered from the disk image, consisting of **168 active** and **100 deleted** items. A significant number of these files contain highly disturbing visual content, including images of bound, unconscious, or deceased women, many of which appear to have been deliberately hidden or removed. The retrieval of deleted files implies an effort by the user to erase or conceal incriminating evidence.

Metadata analysis shows that the files were accessed, modified, or created between **March 20–21, 2021**, which aligns closely with the timeline of the alleged crime. These findings, built upon the foundation established by Sir Godwin's proper handling and imaging of the evidence, form a critical digital trail linking the suspect to potential acts of violence and concealment.

V. Conclusion

Based on the forensic evidence extracted from the flash drive—particularly the graphic image content, metadata timestamps, and presence of deleted files—it is highly likely that the device was used to document or store materials related to the alleged rape and murder. The recovered files reflect premeditated attempts to hide sensitive material, and the time correlation between file activity and the date of the incident further strengthens the link between the suspect and the crime.

With the evidence verified and preserved under the direction of Insp. Godwin S. Monserate, and with subsequent forensic analysis reinforcing its relevance, it is recommended that these findings be submitted as **primary digital evidence** in support of the ongoing criminal investigation. The cumulative artifacts strongly support grounds for prosecution.

VI. Recommendations

- Submit all relevant extracted images, metadata, and file timelines to the authorities handling the case.
- Recommend that any additional digital devices associated with the suspect (e.g., computers, smartphones, cloud storage) undergo forensic examination to search for corroborating evidence.
- Ensure that the chain of custody, as established by **Insp. Godwin S. Monserate**, remains intact throughout the investigative and judicial processes to maintain the admissibility of digital evidence.
- Due to the disturbing nature of the content found, it is also advised to involve psychological profiling experts to assess the behavioral patterns indicated by the suspect's digital activity.
- Store all recovered materials in a secured, access-controlled forensic repository pending further legal actions.

PROOF OF THE AWESOME OF THE BEST
