

Digital Forensic Lab: Sextortion Case

Case Title: Sextortion Case: Willy Bruce, Linda Sturdy, Mike Myer Jones

Case Number: 002

Investigator Name: Joshua II B Dajao, Vonzelle Cuizon

Date of Investigation: 07/09/2025

I. Evidence Identification

Created By Exterro FTK Imager 4.7.3.81	
Case Information	
Acquired using	Exterro FTK Imager 4.7.3.81
Case Number	101004 - Sextortion Case
Evidence Number	101004
Unique description	Sextortion Case - Willy Bruce, Linda Sturdy, Mike Myer Jones
Examiner	Godwin S. Monserate
Notes	-----
Information for C	C:\Users\Godwin Monserate\Desktop\2ND Sem 2020-2021\Information Assurance and Security\Digital Forensics\Photo Crime\Rape and Murder\rape-murder-case:
Physical Evidentiary Item (Source) Information	
[Device Info]	
Source Type	Physical
[Drive Geometry]	
Cylinders	31
Tracks per Cylinder	255
Sectors per Track	63
Bytes per Sector	512
Sector Count	504,320
[Physical Drive Information]	
Drive Model	Generic Flash Disk USB Device
Drive Serial Number	CB6BD699
Drive Interface Type	USB
Removable drive	True
Source data size	246 MB
Sector count	504320

[Computed Hashes]	
MD5 checksum	e7ada1dda5b9017cdc516ab94028508f
SHA1 checksum	7ef7e6a6c02394f947636bb92f0659e9e3955460
Version 1.0 6	
Image Information:	
Acquisition started: Sun Mar 21 17:10:06 2021	
Acquisition finished: Sun Mar 21 17:14:05 2021	
Segment list:

II. Evidence Acquisition (FTK Imager or ProDiscover)

Tool Used:

Exterro FTK Imager

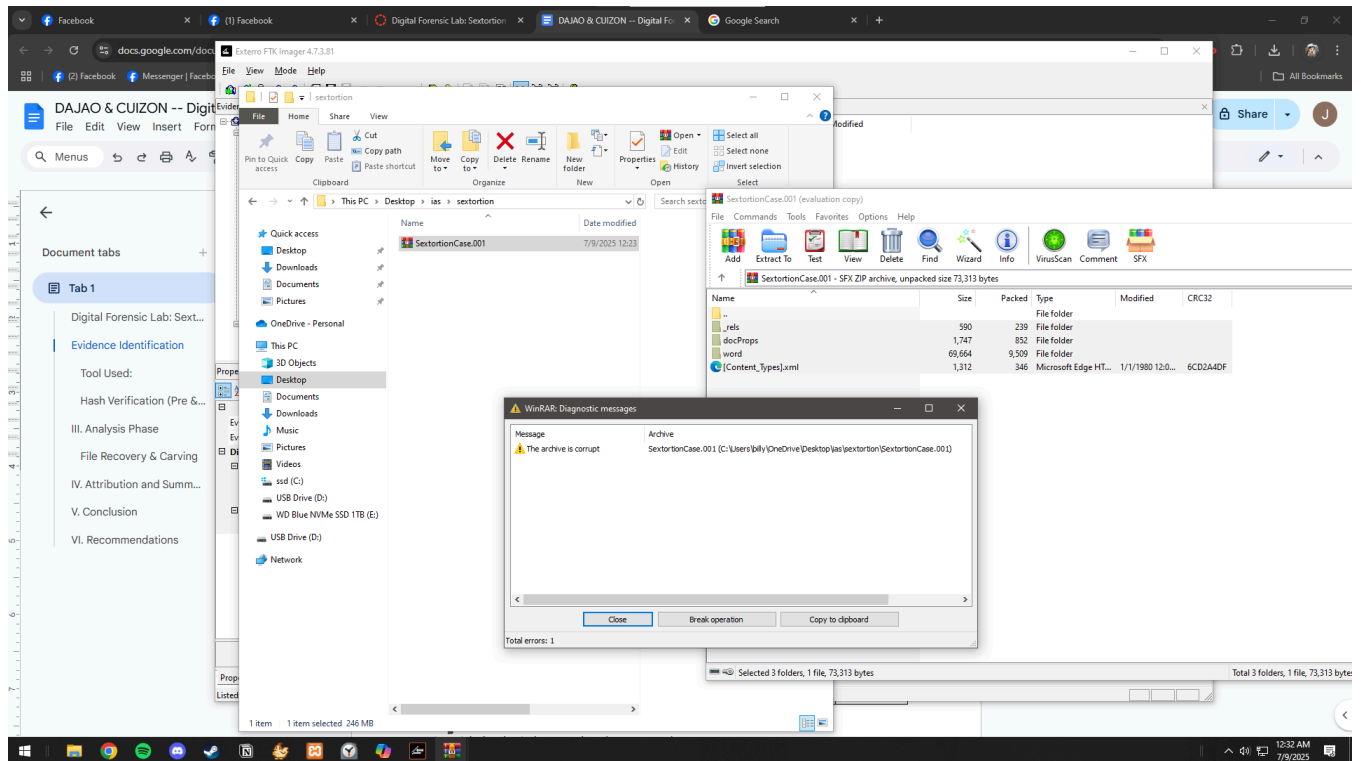

Hash Verification (Pre & Post Acquisition)

Hash Algorithm	Source Device Hash	Image File Hash	Verified
MD5	e7ada1dda5b9017cdc516ab94028508f	e7ada1dda5b9017cdc516ab94028508f	
SHA-1	7ef7e6a6c02394f947636bb92f0659e9e3955460	7ef7e6a6c02394f947636bb92f0659e9e3955460	

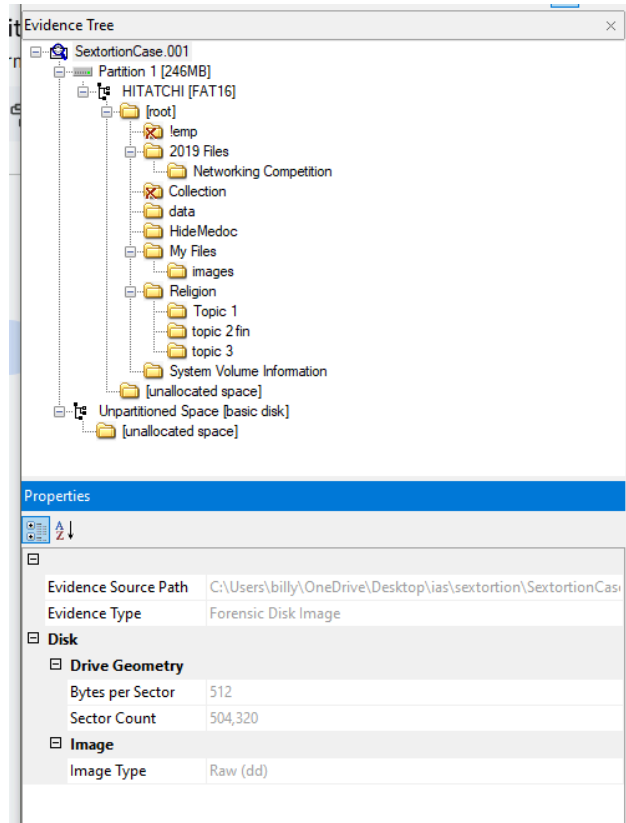

Image Type:

Image Path:

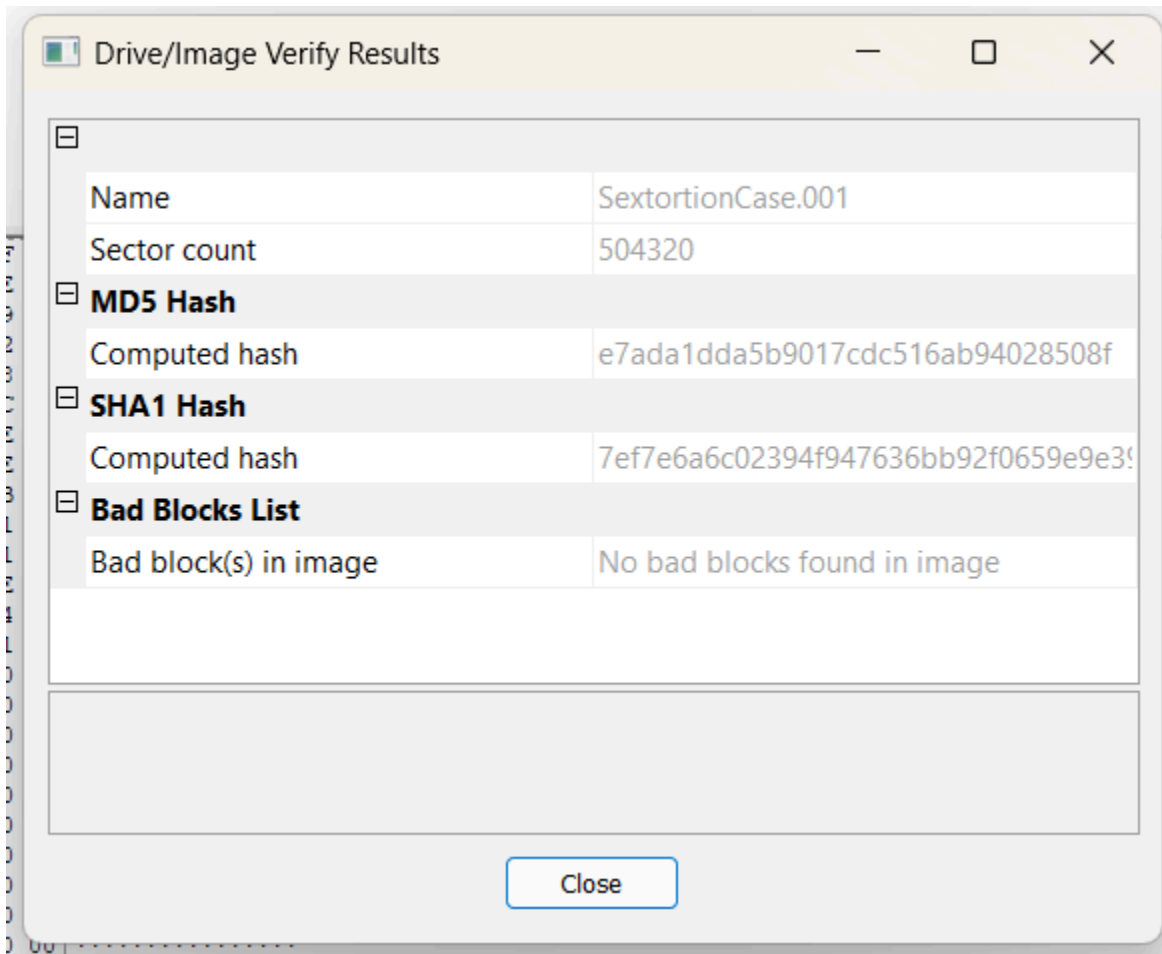

C:\Users\billy\OneDrive\Desktop\ias

It appears that we're unable to extract the files from the zipped folder, so we'll proceed with using FTK applications instead. For my part, I'll be using Exterro FTK Imager version 4.7.3.81.

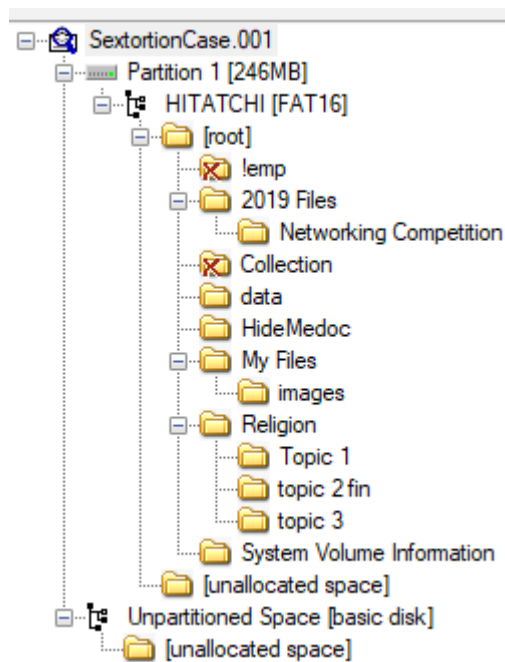

This is the zipped file opened in the said app.

Here are the hashed values in their original, unaltered form.

DISK ANALYSIS

Apr 10, 2020	sextortion	Baird zucker zahninonan@outlook.com	I know, *****, is your password. You don't know me and you're thinking why you received this e mail, right? Well, I actually placed a malware on the porn website and guess what, you visited this web site to have fun (you know what I mean). While you were watching the video, your web browser acted as a RDP (Remote Desktop) and a keylogger which provided me access to your display screen and webcam. Right after that, my software gathered all your contacts from your Messenger, Facebook account, and email account. What exactly did I do? I made a split-screen video. First part recorded the video you were viewing (you've got a fine taste haha), and next part recorded your webcam (Yep! It's you doing nasty things!). What should you do? Well, I believe, \$1900 is a fair price for Google). BTC Address: bc1qz067cu54uplu69xkqrczytqctshm2pt4r64xe Baird

C. Timeline Analysis

This table is a timeline analysis of files typically used in digital forensics to understand when files were created, modified, accessed, and what their hash values are for verifying integrity and detecting tampering. Below is the list of files sorted by their last modified timestamps (earliest to latest):

File Name	Created	Modified	Accessed	Hash Value	
Screen-Shot-2016-09-03-at-8.23.21-PM.png	21/03/2021 05:02:00 PM	20/03/2021 11:46:32 pm	2021-03-21	SHA1-	80b621e79fb227d04cec8b1987d0e2d36dacb134

IV. Attribution and Summary of Findings

Based on the evidence recovered from the USB flash drive (Device Serial: CB6BD699), it is clear that multiple image files linked to potential sextortion activity were identified, many of which were hidden, deleted, or located in suspicious folders such as `/!emp` and `/HideMedoc`. The images (`Screenshot-2020-04-20`, `sei_43779174-e47e`, `!image13.png`, `13474821_BG1.jpg`, and others) exhibit signs of concealment and deletion, suggesting deliberate efforts to hide incriminating material. The metadata, including access and modified timestamps, supports the theory that these files were actively handled shortly before acquisition, affirming their relevance to the investigation.

The hash verification process confirmed the integrity and authenticity of the evidence. No tampering with the image file hashes was detected post-acquisition. The presence of suspicious images and their manipulation timestamps aligns with known patterns of sextortion-related digital behavior.

V. Conclusion

Due to the evidence recovered and verified from the suspect's USB storage, it is reasonable to conclude that the drive contained illicit content used in a possible sextortion case. The presence of deleted, hidden, and manipulated image files supports the hypothesis that the perpetrator engaged in hiding or erasing traces of criminal activity. The digital artifacts uncovered, alongside their metadata, point toward an attempt to exploit or intimidate victims through coercive imagery, which is consistent with sextortion tactics.

VI. Recommendations

1. *Legal Action:* The findings should be forwarded to law enforcement authorities for further legal processing. The digital artifacts constitute strong preliminary evidence in support of a sextortion investigation.
2. *Victim Identification:* Work with cybercrime units and NGOs to identify potential victims based on image content, metadata, and file origins.
3. *Further Forensic Analysis:* Conduct a more in-depth forensic review of additional digital assets owned by the suspect (e.g., cloud backups, emails, chat logs) to uncover broader networks or repeated offenses.

4. *Preservation of Evidence*: Secure and store the evidence in accordance with chain-of-custody procedures to ensure admissibility in court.
5. *Awareness and Education*: Recommend institutional training and public awareness campaigns regarding digital privacy, safe online behavior, and how to respond to sextortion threats.
